

Customer comments about the VaporShark:

“We have been using your VaporShark Industrial System and the Restorator with great successes in our flood/microbial remediation jobs. They really get the job done in taking care of bad odors, and our customers are impressed with them.”
— C.S., A-1 Extraction, HAWAII

“Vaportek works great. Unlike ozone, the product is not harmful and can be used in occupied structures. It destroys dead body odors, smoke odors, and skunk odors, to name a few...”
— M.M., Paul Davis Restoration/Denver, COLORADO

“...I also love the product. I use it in almost all fire restoration projects that I do, providing safe and effective deodorization techniques. Simply put, I find it nothing less than GREAT! Definitely not a “cure all,” yet effective in most every case used.”
— J.D., National Center for Advanced Training/Dixie Steam Way, ALABAMA

“I just wanted to say you have an awesome product. I have just finished using your VaporShark on a fire restoration job and it successfully removed a very unpleasant odor in a surprisingly short space of time. Thanks very much and I am truly impressed...keep up the good work. It certainly makes work easier for companies like mine.”
— B.N., Rescue Clean, NEW ZEALAND

“I’ve successfully used the VaporShark to mitigate odors from all kinds of fires. The VaporShark never failed me! The product was so effective—and a lot safer than ozone—that we just stopped using ozone. When using ozone-generating machines, we told customers they would have to evacuate their homes. We put up warning signs and sealed job sites. These precautions really scared customers, especially seniors. Customers became very anxious about our procedures. Using Vaportek products, we didn’t have to deal with any of that. Vaportek is a better way of doing business.”
— J.C., Purofirst, NEW JERSEY

“Just a quick note to thank you for an effective product. We recently relocated a cigar store in our mall and found an unpleasant lingering odor in the vacated unit. The malodor has been hindering potential new tenants from considering the space. Using your VaporShark unit for a few days neutralized the unpleasant odor and made a big difference. The ease of use and effectiveness is remarkable.”
— W.B., Brayton Management Co., Inc., WISCONSIN

“Just a short note to express our satisfaction with the VaporShark units we purchased from your company. We at Able Restoration are now the proud owners of six of your VaporSharks. We cannot praise the product enough. The Shark, as we call it, has saved the day on many of our jobs. We would highly recommend any emergency company to think twice before using any other product. Another very important point is the service that comes attached with your product. Never a question on repairs or replacement. Thank you from a satisfied customer.”
— C.L., Able Restoration, Inc., MASSACHUSETTS

“The Vaportek units (and air scrubbers) are your only option on a smoke damage job in an occupied structure. The new cartridges and membranes designed for protein fire odors are fantastic! On smoke damage jobs, we set up the Vaportek upon our arrival. This immediately provides an initial ‘good’ smell customers appreciate and comment on. My favorite recurring comment is ‘You’ve only been here five minutes, and it already smells like you’re making progress!’ Throughout the job, these units absorb, modify and deodorize ‘bad’ odors, making the work environment MUCH more pleasant for everyone. After the job, we offer to leave Standalone Cartridges or the [EZ-Twists], which have so far eliminated call-backs due to ‘psychological’ or imagined odor. We’ve had no complaints, even with customers who are sensitive to perfumes and the allergy-prone—everyone likes the Vaportek.
P.S. Customer service at Vaportek is awesome!”
— N.K., Advanced Restorations, MICHIGAN
