

Pioneering Simple Solutions for Tough Odors Naturally Since 1979

STATEMENT OF SAFETY

Since 1979, Vaportek has been manufacturing internationally used air treatment products. Millions of our membrane-based products have been used without incident by healthcare companies, industrial manufacturing facilities, hotels, and countless other places of business. There has never been a claim of ill health associated with our products. We believe that our products, used in accordance with the directions provided, are safe for people and the environment.

Our products were originally developed under the research and development arm of a major U.S. medical products supplier. All products were put through rigorous testing and quality checks to assure safety in use. The liquid compounds used in our products contain natural, essential oils. These natural oil compounds are formulated only with ingredients that have been certified as GRAS (Generally Regarded As Safe) by the American Food and Drug Administration. When used in Vaportek membranes, these products emit odor control and aroma delivery vapor that is diluted by billions of parts with air.

Vaportek is committed to providing the utmost in safe and effective products. We have maintained a rigorous program with our suppliers to ensure all materials supplied to us are consistent with the exact quality standards established at our founding.

Your consideration of our products is appreciated.

Sincerely,

John D. Bryson, Jr.
President
